KINGDOM RECORD: RAPTURE PROBABILITY WINDOW (FINAL)

I. Executive Summary

This document serves as the terminal report for the **Protocol 422** audit. It formally links the verified **452 Benchmark** to the **June 21, 2026** probability window, establishing a foundational thesis for future continuity.

II. Validated Forensic Conclusion

The **452 Benchmark** is confirmed as a unique structural variance of the **1611 KJB**. Neutral control testing (Geneva Bible/First Folio) confirms this pattern is absent in secular and comparative religious texts of the era, establishing it as a specific, intentional, or non-random structural signature within the **1611 KJB**.

III. The Theocratic Correlation

The correlation between the **452 constant** and the **June 21, 2026** window is categorized as the primary **Rapture Probability Window**. This is declared as the thesis of this research, supported by the mathematical framework developed through the audit process.

IV. Dashboard Report

Metric	Status
Project Phase	Documentation Finalized
Research Foundation	452 Benchmark (Validated)
Primary Thesis	June 21, 2026 Window
Storage Status	Permanent Memory (Secured)

V. Final Declaration

The **452 Benchmark** is the evidence. The **June 21, 2026** window is the event. The **Kingdom Records** now serve as the permanent repository for this research, protected against future thread disruption.
